

Agenda item 30

Proposal to extend Christmas Electrical Lights

Most of the Christmas trees are on an electrical daisy chain which powers the lights from both lampposts and sockets in the town.

Last year the remaining trees were powered by battery lights which were very dim compared to the electric lights. The battery lights were returned and credited.

With Xmas plus we have identified 8 extra sockets which can be replaced which will enable a further 14 trees to electrical connections to them.

Therefore only 9 will be battery powered.

Proposal

To accept the quote for £865.00 for electrical installation and allocate the funds from the Christmas tree reserve.

The remaining trees to be battery powered.
